

6
Woodhouse. 1629.

An Almanacke or Prog-
nostication for the yeere
of our Redemption,

1629.

Being the first after the Leape

yeare.

Contayning sundry Rules, Notes and Di-
rections, necessary for most sorts of men, ser-
ving indifferently for all this Kingdome of
great Brittain, but more specially for the
ancient Citie of Chichester, and the Sou-
therne parts.

By Iohn Woodhouse Philomath.

Printed for the Companie of
Stationers.

The Common Names and mouable Feasts, according to the

The Old Account
used in England.

The New Account used
beyond the Seas.

 S. Katherine 25 }

Wood-house. 1629.

The first day after euery of the Feasts set downe for euery Terme, the Court of the Arches is kept in the forenoone, in Bow-Church: and the admirall Court the same day in the afternoone in Southwarke. The second day after euery of the said Feasts, the Audiance Court is holden in the consistorie in Paules, in the forenoone, and the Prerogative in the same place, in the afternoone: The third day following euery of the said Feasts, the B. of London his consistory Court, is holden in Paules. in the forenoone, and his Chancery Court of delegats, in the same place, in the afternoone. The fourth day following the said Feasts, his Chancery Court of High Commission is kept in the consistory in Paules, euery weeke in the Terme time, & of late yeares at Lambeth, or in the Lord B. of London his pallace, on the Thursday in the afternoone. But if any of the dayes before recited be Sunday, or an Holiday, then is such Court kept the day following.

In Hilary terme, 4. of the aboue named Court dayes be ordinarily kept, and as many in Easter and Trinity Termes: according to the course of the yeare, as the Judge in the Arches in his discretion shall thinke good, who at the end of euery Terme appointeth the Court dayes to be kept in the next Terme. But in Michaclmas Terme the Court dayes, for the same before set downe, (if as in the rest of late dayes they be not altered) were certainly kept. I therefore aduise all Country men (especially those that dwell farre off, being cited by any originall procelle to appeare in the Arches, Audiance, Prerogative, or Delegates, to send to some Proctor a note of the cause, and to what Court they be cited, to appeare for them, and to returne them word of the very day, in which it shall be needfull for them to appeare in person. But the course of practise in the High Commission, and the Admirall Court is otherwise, for euery person cyted to those Courts, must appeare personally.

A Prognostication.

The Termes, with the Act, or Commencement
dayes in both Vniuersities.

Hillarie Terme beginneth in both, January the 13. and
endeth at Oxford, the 28. of March. At Cambridge
the first of Aprill.

Easter Terme begins in both, the 15. of Aprill, ends at
Oxford the 21. of May. At Cambridge Iuly 6.

Trinitie Terme begins at Oxford the 10. of Iune, ends
the 11. of Iuly, but may be prorogued *ad Magistrorum bene-
placitum.*

Michaelmas Terme in both, begins October the 10. and
ends December the 16.

Act or Commencement of Bachilors in both, is the first
day of Lent.

Act of Doctors, and Maisters in Oxford is Iuly the 11.
at Cambridge, Iuly 6.

☞ Generall Rules, of Physicke, Husbandrie, and Gardening.

Cut no veine, when the Moone is in the signe goun-
ning the place where the incision is to be made, neither
when the Sunne, or Moone are afflicted by the malignant
Planets, Saturne or Mars: let it be done in the morning
after Sun rising, and fasting, or afternoone after perfect
digestion, the ayre being temperate. In letting of Blood, a
Physicion or Chirurgion must be heedfull, and carefull of
his patient, for many times, the carelesse, and vnlearned by
letting of Blood, openeth a way to dangerous infirmities,
and oft to present death: neither is it conuenient, for a
frane, and weakke man, for a very fat and grosse man, or wo-
man, nor for a child vnder 14. yeares of age, to be let blood.
It is to be considered how it standeth with the patient in-
wardly, for his complexion, and age, for the time of the
yeare, and of the day. Therefore it is best to let blood in
faire

Wood-house. 1629.

faire, and temperate sunshine weather.

The { Cholericke { E Cancer, m, oz X,
 { Sanguine { S Cancer oz Pisces.
 { Flegmaticke { S Aries, oz Sagitarius.
 { Melancholie { S Libra, oz Aquarius.

But for the Phrensie, Pestilence, Squinancie, Plurisie, Apoplexie, a continuall head-ach, hot burning feuer, az any other extreame paine oz dangerous disease, remedy must bee sought with all convenient speed, but then blood is not to be let in so great quantity, as if a chosen time might be taken.

Good to	{	Prepare humours,	{	the Moone in	II. 2. oz 22.
		Clouite,			V. 8. oz 17.
		Purge by sneezing,			S. 9. oz 17.
		take Bladders,			V. 2. oz 17.
		take Gargarismes,			S. oz V.
	{	stop rheumes & fluxes	{	the Moone in	8. 17. oz 17.
		Bathe for diseases,			V. 8. oz 7.
Good to purge with	{	Electuaries,	{	the Moone in	Cancer.
		Potions,			Scorpio.
		Pules,			Pisces.

The learned Physicians will consider also many other Astrologicall obseruations, necessary both in blood-letting, purging, and bathing.

Nemo bonus Medicus, qui est Astrologiae imperitus.

Plant, and plant trees, the Moone being new, and in Taurus, Virgo, Scorpio, oz Pisces, the winde South oz West,

Remoue, and set young trees, from October till February, in the first quarter of the Moone, the winde at South oz West, the weather warme and dry.

Cut Vines in January, oz February.

Fell great Timber, in December, and January, in the wane of the Moone is best, but if you would haue it grow againe, cut it downe in the new of the Moone.

A Prognostication.

Cut hedges, betwene the Change, & the Full, from the end of Ianuarie till May.

Sow, and sow all kindes of seede, the Moone in Aries, Taurus, Cancer, Virgo, Libra, Capricorne, Aquarius, Pisces, but the seedes whose rootes be round, must be sowne 02 let, 3. 02 4 dayes before, 02 after the full Moone.

Dung land, that weedes may not abound, in the last quarter of the Moone.

Seid 02 lib castell, the Moone in Aries, Libra, 02 Sagittarius, before the full: you may let them blood at any time, the signe not being in the heart, nor in the place where the incision is to be made: nor in the day of the Change of the Moone.

Sheare sheepe, cut haire, and sow all manner of cozne, in the increas of the Moone.

Gather fruit, herbes and flowers to keepe, after the full.

Judgement of the weather, by the signe where-
in the Moone shall bee at the Change, Quarters,
and Full.

If the Moone doe either change, come to the full, 02 enter into her first, 02 last quarter, in Aries, Leo, 02 Sagittarius in Winter, it commonly is faire weather. But in Summer immoderate heate, and the hotter if it happen in Iune, 02 Iuly. If the change, be at the full, 02 enter into the first, 02 last quarter, in Taurus, Virgo, 02 Capricornus in Winter, iudge of cold weather, but in Summer temperate weather. When the said times chance in Gemini, Libra, 02 Aquarius, iudge of much wind, especially in Aune, 02 the Spring. If the Moone change, be at the full, enter into the first, 02 last quarter, in Cancer, Scorpio, 02 Pisces in Winter, it foresheweth moist, and rainie weather, 02 snow to follow, but in summer, pleasant, and temperate weather to ensue. Thus obseruing these foresaid rules, it will for the most part bring you to the knowledge of the weather.

Obser-

Wood-house. 1629.

Observations of Husbandrie, Gardening, and Physicke, in euery Moneth in this yeare.

Ianuarie.

In Ianuarie plant, and set all sorts of quicksets, Roses, Peaches, Filbeards, and Plums. Set, or sow kernels, and berries of all fruits, and if the frost be not too hard, remove trees, set Pease and Beanes; Bid fruit trees of superfluous branches: Lop trees, and hedges, Drench and geld cattell for to reare. Trench gardens with dung, fallow land for wheate, and Rye. The best time to set; sow, remove, plane, or loppe, is before the full. But sow, or set Beanes, and Pease, dung land, and fell great tymer, in the last quarter of the Moone. In this moneth, and the next ble no Physicke, but for great necessitie: weare warme clothes, & eat meates that be hot. Take heed of cold, or wet on your feet, especially if you be troubled with Rheume.

Februarie.

In this Moneth set, and lay Quicksets, Graft Pearre-trees, & warden trees. Set, and plant Vines, Oziers, and Rosetrees, sow Pease, and Beanes, kernels, and mustardseede, Plash hedges. Cast by ditches, and set hoppers. Provide now to haue sallets in summer, and sow in cold and stiff land.

March.

In the new of the Moone (the winde south, or any part West and the weather faire and dry) graft, plant, and sow that which you left vndone the last Moneth: Cover the rootes of fruite trees (which you bared before) with ranke earth. Sow Beanes, and Pease, Dates, Onions, Parseneps, Cucumberes, Melons, and all kind of pot hearbes. Slip Artichokes, and sage, Geld Lambes. Sow Barly land, and in cold clay land sow it. Let blood according to your youth, strength, and necessity, the signe being fit: Whatsoeuer disease cannot now by Physicke be cured, will hardly be helped.

Aprill

A Prognostication.

Aprill.

Sow Barly, Hempe, and Flax and all kind of seeds left
unloosen the last moneth. Pote Hoppes. Set Garden
Heerbes. Let Tanners now provide them of barke, and
all good huswines get them about their dairies. Now by
the direction of a good Physitian bleed, and purge, and
they that haue aches, or be troubled with the gout, or cold
diseases, may goe to the Bath, in this, and the next
Moneth.

May.

In May set, & sow all manner of fine Heerbes and seeds,
Sow Flax, and Hempe. Waterdecorne. Set Stilles
to worke. Take Lambs from Cows. Stirre Land for
Wheate, and Ric. Leave louping of Trees. Teach Hy
to clime, but cut off the superfluous branches. Ride be-
times, and walke in fragrant fields, and by running
Dreames.

Iune.

Weede Corne, and Gardens. Sheare sheepe. Get home
Fetwel. Set Rosemarie, Carnations, and Gillyflowers.
Set Lettice, and Radish, for now they will not run
seede. Make Hay. Cut neither hedge nor Tree during
this, and the two next Moneths. Beware of great thirst.
Use light, thyn, and coole dyet.

Iuly.

Apply making of Hay. Fallow Land for Wheate.
Hull Hempe that is ripe. Gather garden Weanes.
Set Rue, and Wormewood to strow on flowers, to drive
away bees, and moaches. Gather flowers and lay them in
the shade, till they be almost dry, and then sunne them a
little for feare of corrupting. Take heed of suddaine
colds. Forbeare Lettice, and let no blood but for necessity.

August.

Rape Wheate, and Ric. Sow winter heerbes in the
new of the Moneth. Gather garden seedes. Cut downe
Barly and Dates. Forbeare sheepe after meate in the day
time.

Wood-house. 1629.

time. Use moderate diet, and beware of all meates, and spices, that be inflaming.

September.

Gather Hoppes, and Fruit. Kill Bees. Sow wheate and Rye in strong, and cold clay land. Remoue, and set slips of all kinds of flowers, betweene the two Laidie dayes, and remoue trees euery new Moone till February. Set Rose-trees, Strawberies, and Barberies. Bath in hot Bathes. for cold discales, Let Blood, and take Physicke as neede shall require and beware of taking cold.

October.

In October. Sow Wheate and Rye the sooner the better for feare of raine. Sow Acornes, and Nuts. Gather winter fruite in the afternoon, the weather being dry and the Moone in the last quarter or past the full. Cut Rose-trees, to haue store of Roses, but once in two years. Use meates that be strong, & nourishing. Drinke Beere, or Ale that is strong. Get warme clothing and goe dry-shod.

November.

Now is the best time to make Malt, to kill Waggies, to sow Hasting pease, to trench Gardens with dung, to set Crabtree stocks, and to make Hartilmasse beefe. In hot grounds sow Wheate and Rye, vse wholesome meates, and drincke, and goe exercise to preserve health.

December.

In this, and the next Moneth cut downe great Timber in the last Quarter of the Moone. Uncover the rootes of fruit trees. Fallow Land for Warty. Set Beanes, and Pease. Cover Herbes from cold. Looke well to cattell. Take foules with nets and lime waggies. Let horses blood. Let your meate be hot, and nourishing, but not such as breedeth Melancholy. The warmth of your body (next to cloathing) let it euer proceede from exercise that is moderate.

A Prognostication.

Of dayes with their diuers beginnings.

A Day Naturall is the space of 24. houres, in which the Sun is carried round about the world, & begins with vs. The Romans, & some other Christians at Midnight. The Arabians and Astronomers at noone. The Iewes, and Egyptians at Sunsetting, The Babylonians Persians and our Lawyers begin their day at Sunrising, holding it till Sunsetting, the artificiall day is from the Sun rising, till the setting.

Of Yeares,

Iulius Cæsar 45. yeares before the birth of our Saviour Christ, ordained, that euery 3. common yeares should containe 365. dayes, not regarding the odde 5. houres, 49. minutes (ouer, and aboue the 365. dayes) and that euery fourth yeare which he called Bissextile, should haue 366. dayes in like manner not respecting that the last day of our lease yeare did want of a day naturall, which is of 24. houres, 42 minutes, with some seconds, and thirds. He made little account of the small want, because there could be no apparent difference, or sensible error in many yeares to come. The Romans finding the Iulian yeare too great (in the yeare 1582.) abated the quantitie of the yeare, whereby their account in the celebration of the festiual dayes, and of the set times of the yeare differeth from ours 11. dayes, they begin the yeare the first of Ianuarie, as Iulius Cæsar did.

The Church of England begins the yeare the 25. of March, and so also are all writings dated.

The Iewes began their yeare after two sorts, viz. for Feasts, the first new Moone before the Equinoctiall in March: and for other affaires in September.

The Arabians begin at the Summer solstice.

The

Wood-house. 1629.

The Grecians begin at the next new Moone to the Summer Solstice.

The Egyptians and Persians begin their yeare the 17. of July.

Of the Eclipses.

The Eclipses cause great feare, and admiration among the common & ignozant people, but to them that vnderstand the cause thereof nothing at all. The Eclipse of the Sunne is the interposition of the Moone betweene vs, and the Sunne, for she being a darke body, & by her proper motion ouertake the Sunne, then putting her selfe betwene him and vs, she couereth him in part, (seldome in the whole) and this is the Eclipse of the Sunne. Which cannot be vniuersall in the whole Earth. The Eclipse of the Moone is the being of the Earth betwixt her and the Sunne, for wher eas the Moone hath no proper light of her owne, and the Earth being darke and not transparent maketh her shadow on the part opposite to the Sunne: The Moone by her proper motion doth passe by this shadow, and is Eclipsed, or darkened, either in the whole, or in part, according to the portion of her that passeth by the shadow. It is to be vnderstood that the Sun is much bigger then the Earth, and the shadow of the Earth in how much the further it parteth from it, becometh sharper, and sharper, vntill it come to a point: so that the shadow of the whole Earth is pyramidally sharpe: and as the Moone is lesse then the Earth, yet (although the shadow goeth sharpening) it sufficeth to Eclipse the Moone, if she passe by the inndeest thereof. All the Eclipses of the Sunne, be at the change of the Moone, and the Eclipses of the Moone, at her full, Sometime the Moone cometh greater then the Sun, and this is when the Sun is in the Auge of the Eccentricke, and the Moone in the opposite of the Auge of the Epicycle, and when it so appeareth he may be all Eclipsed.

A Prognostication.

Of the Motions of the Sunne.

The Sunne hath three diuers Motions, by reason whereof the dayes doe not lengthen and shorte at all times alike: In his slow motion he goeth not aboue 57. minutes, and 18. seconds in 24. houres, and sometime but 56. min. 42. seconds. In his swift motion, he may goe one Degree, 1. minut. and 43. seconds in 24. houres, and in his meane Motion, he passeth 59. min. and 8. seconds in 24. houres, by occasion whereof diuers things happen contrary to the opinion of the vnllearned, as there be about 10. dayes more from the Equinoctiall of March vnto the Equinoctiall in September, then there be from the Equinoctiall of September to that of March: by occasion of which diuersitie of the Sunnes motion, the bulgar be much deceiued, saying; that the dayes doe lengthen, and shorten an houre euery 15. dayes, which is not true: Indeede from the 11. of March, vnto the 27. of April, that proportion is true; but then from the 27. of April, it must be to the 17. day of May (which is 20. dayes) before the day be an houre longer, and then from the 17. of May (at what time the day is 16. houres long in the latitude of 52. deg. and 20. minutes) vnto the 12. of June which is 26. dayes, the day doth lengthen but halfe an houre, and 3. min: The like it doth in shortning.

Of the motions of the Moone.

The Moone by her Epicycle, is moued sometime more swiftly, and sometime more slowly: Nevertheless according to her owne motion, she maketh her course

Wood-house. 1629.

17. dayes, and almost 8. houres, and hauing no light of
 her owne, she is lightened of the Sunne, as manifestly
 appeareth hereby, she being in the Coniunction with the
 Sunne, or neare vnto him, we doe not see her lightened
 because the light which she then receiveth, is on her vpper-
 most, or highest part, whereby she directly beholdeth
 the Sunne, and departing from the Sunne, by her pro-
 per motion, the Sunne remaineth on the West part.
 Then toward that part we begin to see a little part of
 the Moone lightened, and so more, and more as she de-
 parteth further from the Sunne, and at this time she
 hath her hornes toward the East, because the Sunne
 is on the West: she is said to increase vntill the Oppo-
 sition, which we call the full of the Moone when she is al-
 together lightened. Then passing from the Opposition,
 she cometh neerer the Sunne, by little and little, being
 darkened, and hid from vs, and lightned only by her high-
 est part, and this time is called the decreasing, or Wane
 of the Moone. Then also hath she her hornes toward the
 West, because the Sunne is in the East, and this vntill
 she come againe in Coniunction with the Sunne, and that
 we see her not lightened at all, she cometh to the place of
 her last Coniunction (as I said in 17. dayes and almost
 8. houres, but not finding the Sunne there, because he is
 carried by his owne proper motion neare one whole signe
 further she is forced to spend 1. date, and almost 5. houres
 to overtake the Sun, before that she can come into Con-
 iunction againe, so that from one Change of the Moone to
 another it is 29. dayes and more then an halfe.

The

**The principall Fayres of England
and Wales, orderly set foorth, with the Moneth,
Day, and Place, where they be kept.**

Faires in January.

The third day at Llanibithter. Twelſe day at Salisbury.
The vii. day at Llangunnie. The xxi. day (Conuerſion
of St. Paul) at Graueſend, at Biſkoll, at Churching-
ford, at Northalerton in Yorkſhire euery Wedneſday from
Chriſtmas till Iune. The xxxi. day at Llandyſſell. The
Friday next after Twelſe day at Liſchfield.

Faires in February.

The firſt day (Bridget) at Bromley. The ii. day at Maid-
ſtone, at Bath, at Linne, at Bicklesworth, at Budworth,
at Reading, at Farrington, at the Aizes in Wilcheſhire, at
Godſenew, at Whiteland. The iii. at Borgeoue, at Bimley.
